

# Total Cost of Care Workgroup

January 25<sup>th</sup> 2017

# Workgroup Charge

---

The initial charge of the TCOC workgroup is to provide feedback to HSCRC on the development of specific methodologies and calculations while considering implications to avoid cost-shifting for:

1. Hospital-level Medicare TCOC guardrails for the Amendment Care Redesign Programs
2. The Hospital-level Incentive Pool for the Complex and Chronic Care Improvement Program (CCIP)
3. Value-based payment modifiers based on Medicare TCOC
4. The development of a Geographic Population Model (Medicare and potentially others)

---

# Care Redesign Amendment Update

# TCOC Workgroup will Focus on Two Elements of the Care Redesign Programs

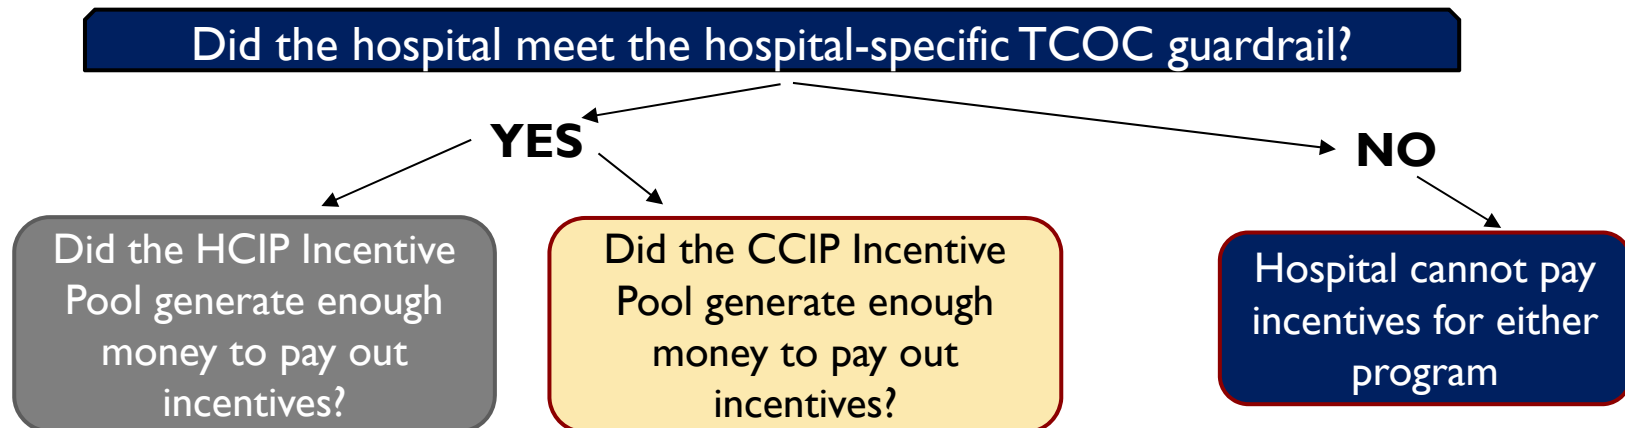

---

## TCOC Guardrails

- ▶ Medicare Hospital-specific TCOC guardrails apply to **both** CCIP and HCIP
- ▶ The same Medicare Hospital-specific TCOC calculation will be used for both programs

## Incentive Pools

- ▶ Physician incentives in both programs are funded out of the hospital GBR, through realized savings
- ▶ This workgroup will focus on the **CCIP program only for the incentive pool**

# CCIP Incentive Pool

---

- ▶ Determines the amount of money available for a hospital to pay out incentives to providers who meet the thresholds for incentives
- ▶ A hospital's Incentive Pool is based on **all Medicare FFS Benes who see the hospital**, not only those enrolled or identified as high or rising need.
- ▶ Pool is derived solely from the Participant Hospital's budget and is driven by reductions in Potentially Avoidable Utilization (PAU) for all Medicare Benes
  - ▶ 50% of 30-day readmissions (inpatient and observation stays of greater than 23 hours)
  - ▶ 100% of Prevention Quality Indicators (PQI)
- ▶ Incentive Pool Amount Formula =  $[(\text{Standardized Historical Costs of PAU in Base Year} - \text{Standardized Current Year Costs of PAU}) - \text{Intervention Costs}] * 50\%$   
*Variable cost (VCF)*

# Estimating PAU Reduction for CCIP Incentive Pool Payout

---

- ▶ Overall formula to calculate the estimated reduction in PAU necessary to fund a hospital's incentive pool is:

$$\frac{(\text{Provider Incentive Payments} + \text{Intervention Costs}) \times 2}{\text{Incentive Pool Base}}$$

- ▶ In the example below, the hospital would need to decrease PAU by 8% in order to fund its Incentive Pool.

Steps	Hospital Example
Calculate Incentive Pool Base	PQIs @ \$ 6 million + 50% of Readmissions @ 8 million = \$10 million
Estimate Benes: High Need	100 benes
Estimate Benes: Rising Need	500 benes
Calculate Incentive Payments: High Need	Average payment of \$1,000 @ 100 benes = \$100,000
Calculate Incentive Payments: Rising Need	Average payment of \$150 @ 500 benes = \$75,000
Add Intervention Costs	200,000
Multiply by 2 to account for Variable Cost Factor*	$(\$100,000 + \$75,000 + \$200,000) \times 2 = \$750,000$
Divide result by incentive pool base	$\$750,000 / \$10 \text{ million} = 8\%$

\*Variable Cost Factor (VCF) assumes hospitals will only save 50 % of the reduced PAU cost due to fixed costs of providing services.

---

# Statewide PAU numbers

---

- ▶ **Statewide Medicare FFS Total PAU Charges:**
  - ▶ 17% of all Medicare FFS Charges in FY15 for a total of ~\$1 billion
  - ▶ Readmissions = ~\$600 million and PQIs = ~\$400 million
- ▶ **State identified high need and rising need benes for FY15 using state definitions.**
  - ▶ For High Need benes, PAU charges represent 40% of total hospital charges.
  - ▶ For Rising Need benes, PAU charges represent 17% of total hospital charges.
  - ▶ PAU charges for High and Rising Need benes represent **87%** of Statewide PAU Charges for all Medicare FFS benes.

<b>Medicare FFS FY 15</b>	<b>High Need</b>	<b>Rising Need</b>	<b>Total Rising and High Need</b>	<b>All Medicare FFS</b>
# of Benes	18,000	92,500	110,500	900K
Total Hospital Charges	\$1,370,935,217	\$1,982,613,559	\$3,353,548,776	\$5,927,308,998
Total PAU Charges	\$545,969,507	\$334,016,995	\$879,986,502	\$1,010,942,639
% PAU in category	40%	17%	26%	17%
% All Medicare FFS PAU	54%	33%	87%	100%

---

## TCOC and MACRA Strategy

# TCOC Analytical Steps

---

- ▶ What do we include in the TCOC measurement (numerator) ?
- ▶ How do we set benchmarks ?
- ▶ How do we structure the payment adjustments?
- ▶ How do we qualify clinicians under MACRA ?

# MACRA-tizing the Model

---

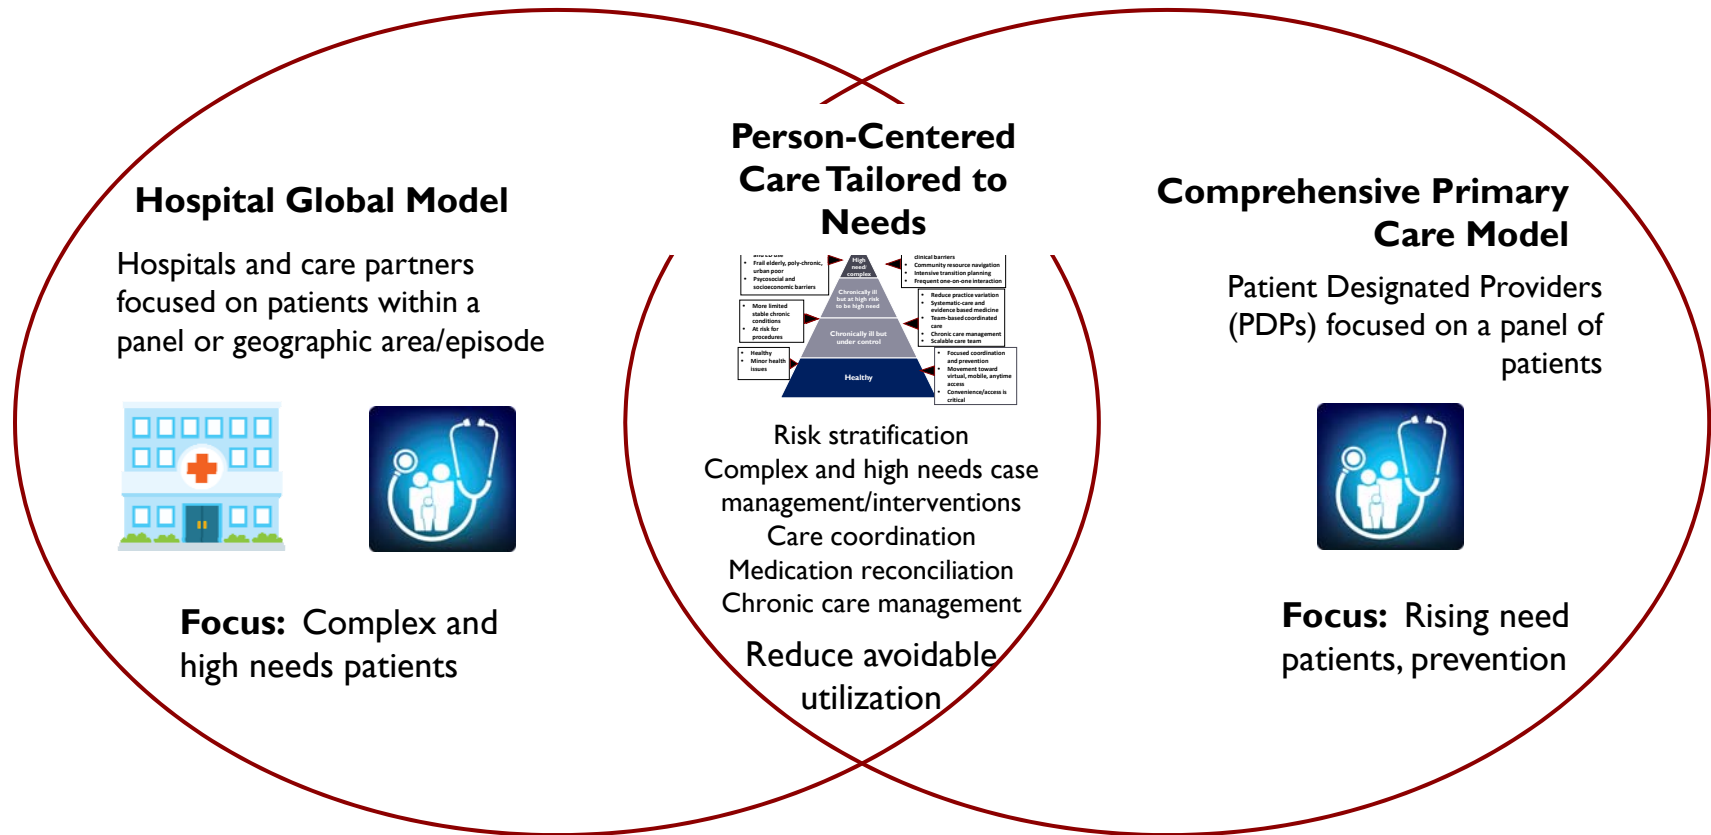

- ▶ **Progression**
  - ▶ Engaging physicians and other providers in aligned efforts
- ▶ **Key strategies to have the All-Payer Model qualify as Advanced APM:**
  - ▶ CMS approved Care Redesign Programs to link physicians to the All-Payer Model
  - ▶ Hospital global revenues incorporate non-hospital Part B costs through incentives
- ▶ **Other key approaches to have Advanced APMs in Maryland:**
  - ▶ Statewide Comprehensive Primary Care Model (CPC+ design)
  - ▶ ACOs with downside risk, new Dual Eligible ACOs

# 2019 and Beyond—Progression Plan

---

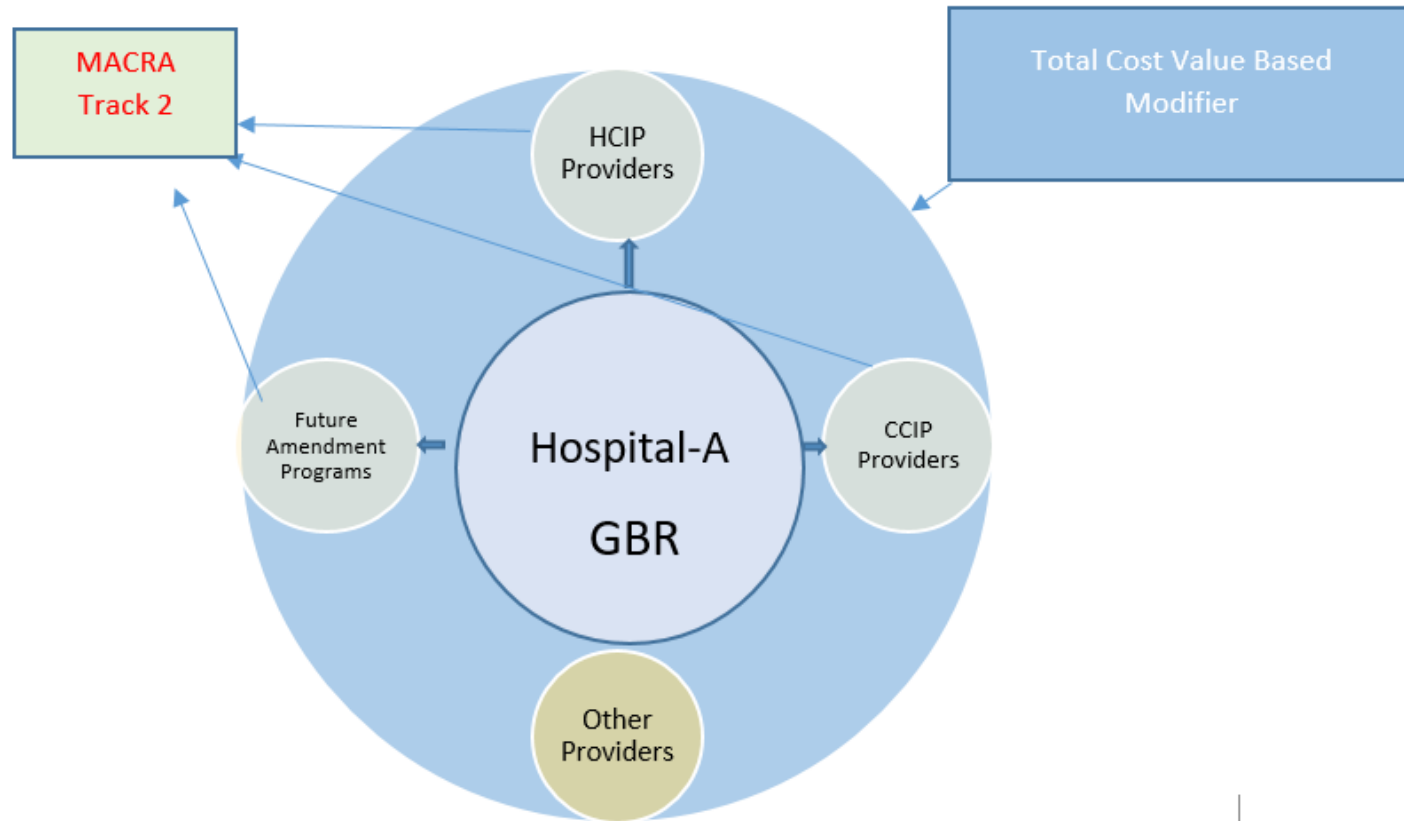

- ▶ Key Components of the Second Term (Starts in 2019):
- ▶ Build on global revenue model and continue transformation
- ▶ Increase responsibility beyond hospital costs
- ▶ Dual Eligibles ACO/Geographic Model
- ▶ Comprehensive Primary Care Model
- ▶ Other payment and delivery transformation
- ▶ Other MACRA-eligible programs

# Maryland's Planned Progression: Synergistic Models

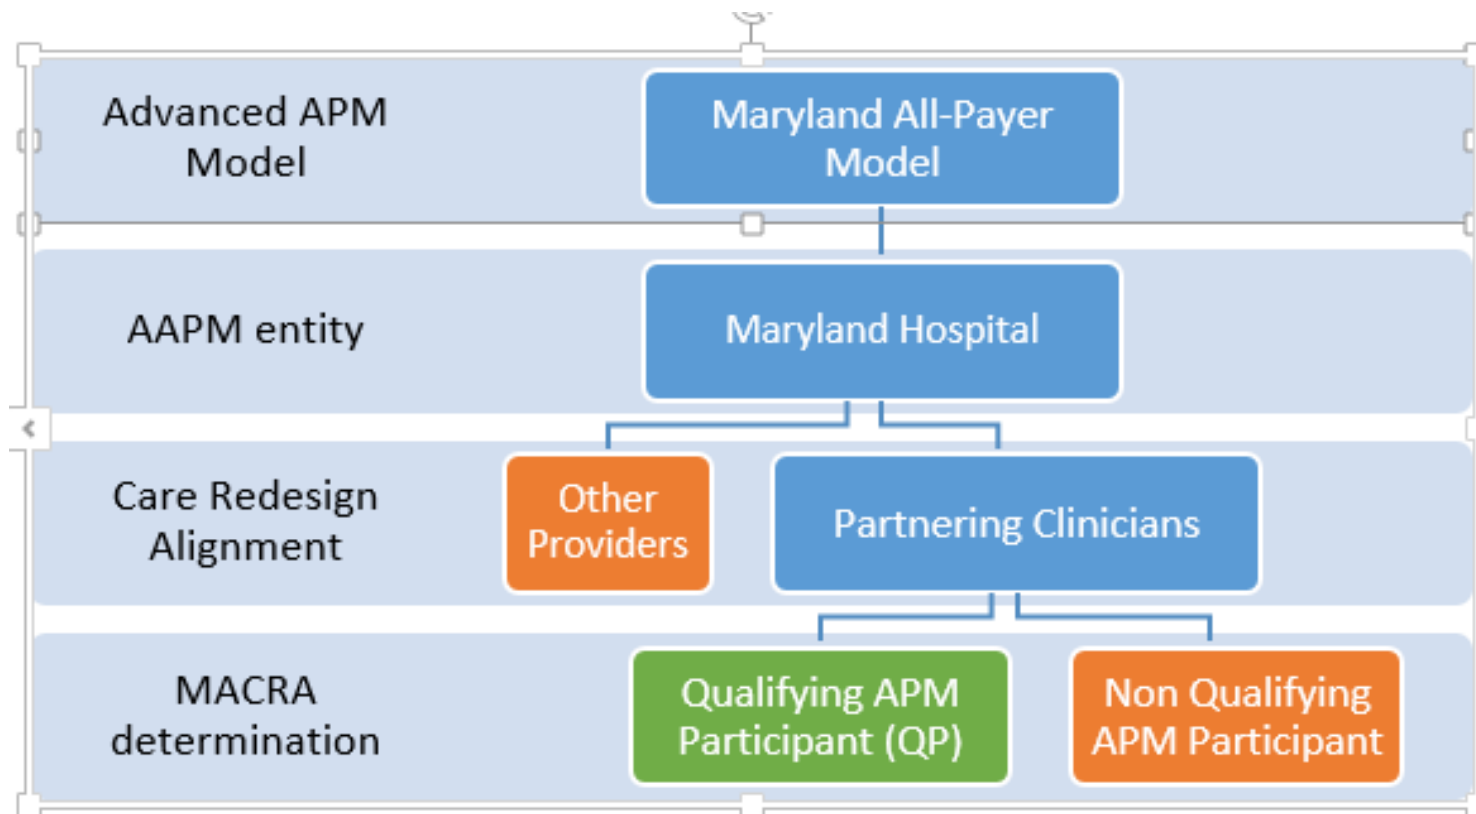

# Total Cost Value Based Modifier-Framework

---

# TCOC Proposed MACRA Eligibility

Eligible clinicians for 2017 defined as physicians, nurse practitioners, physician assistants, certified nurse specialists, and CRNA

# Determining Individual Physician's AAPM eligibility

---

- ▶ Calculations will depend on the structure of the TCOC value based modifier
- ▶ Claims run through TCOC measurement is the key:

- ▶  $\% \text{ Beneficiary} = \frac{\text{Total Provider Beneficiaries Residing in Maryland}}{\text{Total Provider Beneficiary Count}}$

- ▶ Or

- ▶  $\% \text{ Payment} = \frac{\text{Total Provider Payment for Beneficiaries Residing in Maryland}}{\text{Total Provider Payment Count}}$

---

# Total Cost Value Based Payment Modifier Measurement Options

# Guiding Principles from other HSCRC performance measurement policies

---

- ▶ Provide clear incentives and goals.
  - ▶ Promote efficient, high quality and patient-centric delivery of care
  - ▶ Emphasize value, recognizing that this concept will take some time to develop
  - ▶ Promote investments in care coordination
  - ▶ Encourage appropriate utilization and delivery of high quality care
  - ▶ Set predictable financial impact and targets
  - ▶ Hospitals should have the ability to track their progress during the performance period

# Additional Guiding Principles for TCOC

---

- ▶ **Total cost measure should have a broad scope and gradual risk**
  - ▶ Total cost should include to the extent possible all Part A and Part B costs
  - ▶ Measure should be linked to individual hospital performance to the extent possible
  - ▶ Measure should reflect both reductions in avoidable utilization (such as preventable admissions) and efficient high quality continuum of care (such as 30 to 90 day episodes of care)
  - ▶ Payment adjustments should provide controlled risk

# Questions for TCOC Workgroup: Attributing TCOC for VBM

---

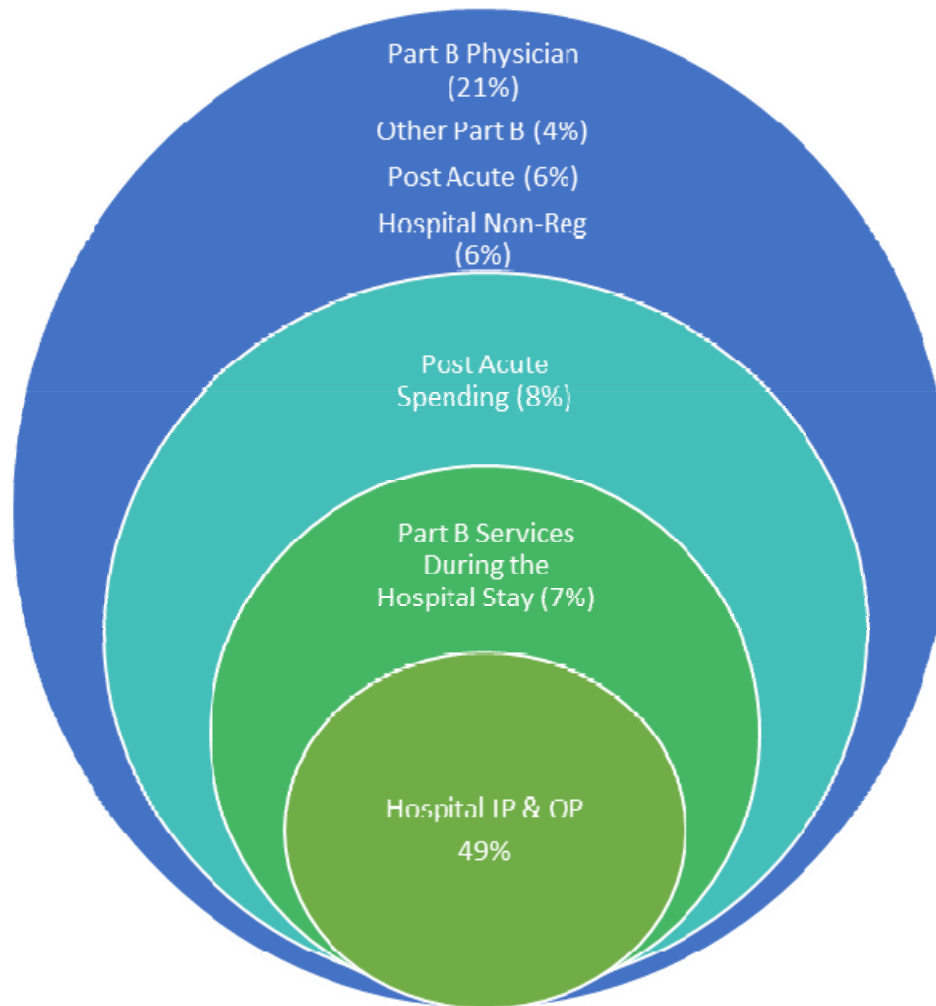

## ▶ How to attribute Total Cost of Care (TCOC) to each hospital?

### Options:

- ▶ (1) Primary Service Area (PSA) – that is, based on the zip codes each hospital has declared as theirs
  - ▶ PSAs are more reliable for assigning TCOC in rural areas
  - ▶ Where multiple hospitals share PSAs, attributing TCOC becomes more complicated
- ▶ (2) Episodes
  - ▶ Based on 48 BPCI episodes used by CMS
  - ▶ Captures only a quarter of TCOC
- ▶ (3) Stepwise Approach:
  - ▶ Built from hospital utilization, related post-acute and Part B spending – which in total, captures 70-75% of TCOC
  - ▶ The remaining could be attributed via market share distributions or PSA

# Distribution of TCOC

---

## List of other methodological considerations

---

- ▶ TCOC Performance Year | Target = TCOC Base Year \*  
Expected trend factor
- ▶ Performance Benchmarks (state, national, best practices etc)
- ▶ Population served (denominator)
- ▶ Population Risk adjustment (HCCs, Demographics, Socio-economic factors, etc)
- ▶ Standardization of charges (Medical education, DSH, etc)
- ▶ Annual vs cumulative measurement etc.

---

# Total Cost Value Based Payment Approach

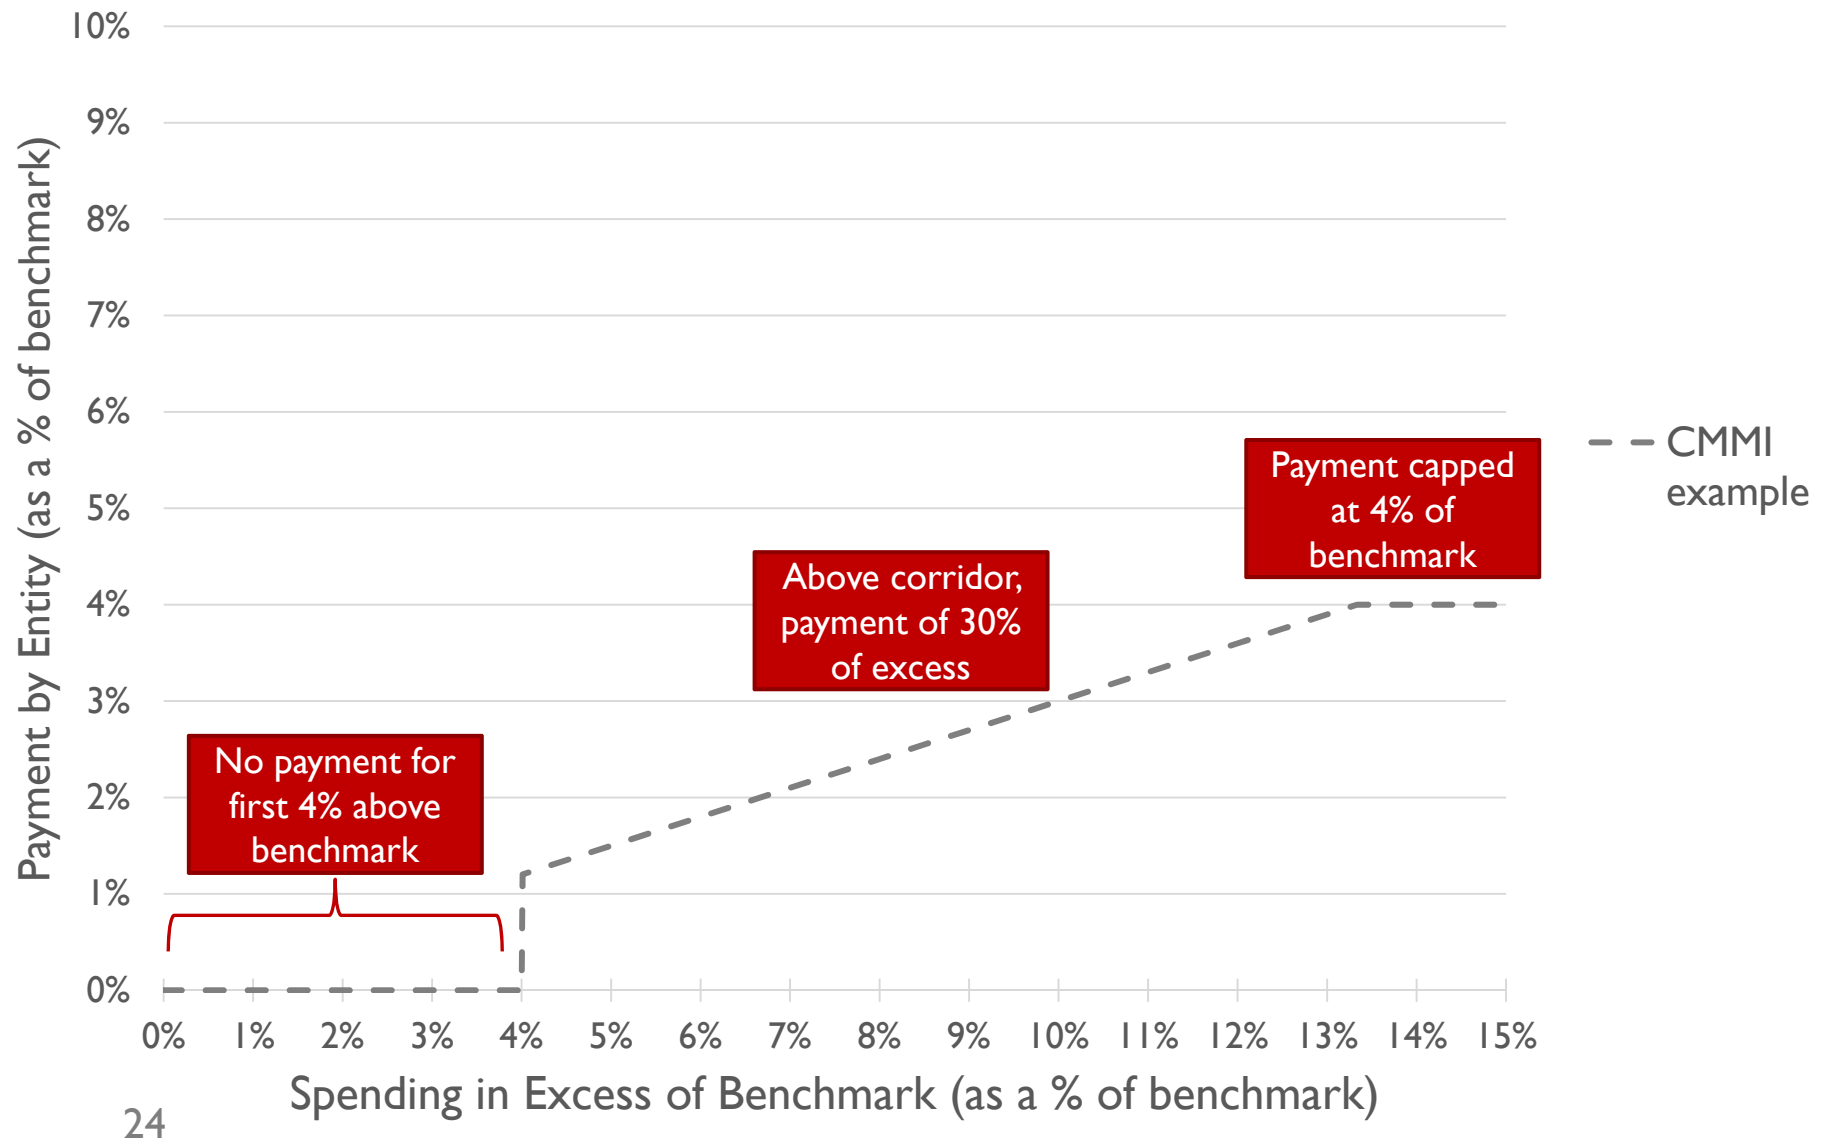

## Questions for TCOC Workgroup: Structuring VBM for Possible Payments and Incentives

---

- ▶ **Once TCOC has been attributed to each hospital, what size of payment is appropriate? Options – as illustrated in the following figures:**
  - ▶ CMMI's Track I+ ACOs appear to follow draft MACRA regulations, with losses capped at 4% of the benchmark
  - ▶ However, Maryland hospitals already face substantial financial responsibility based on their GBRs
  - ▶ Concept paper to CMS:
    - ▶ Could propose a VBM to make hospitals accountable for TCOC
    - ▶ But at levels below Track I+ ACOs, acknowledging responsibility Maryland hospitals already bear

# CMMI: Proposed MACRA Rule & Track 1+ ACOs

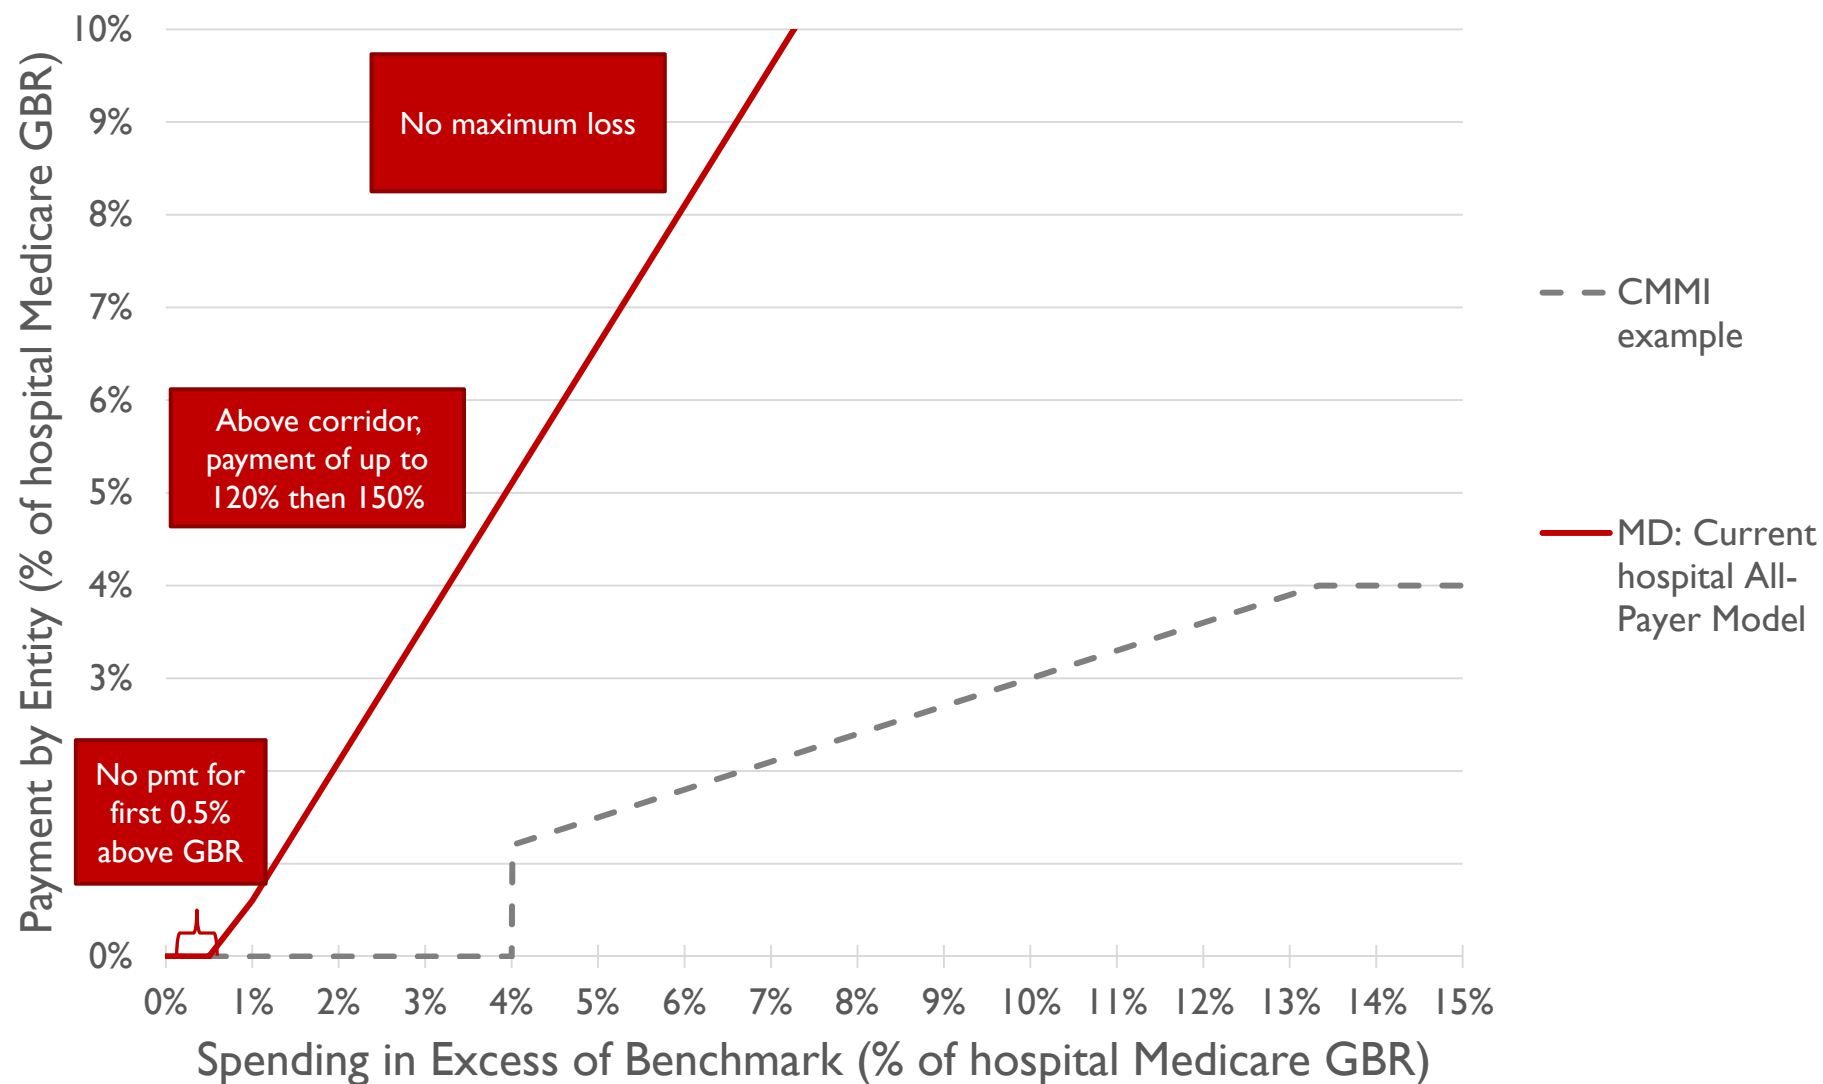

(Source: Figure D of 81 *Federal Register* 28308. Marginal risk and stop-loss below applies to Track 1+ ACOs)

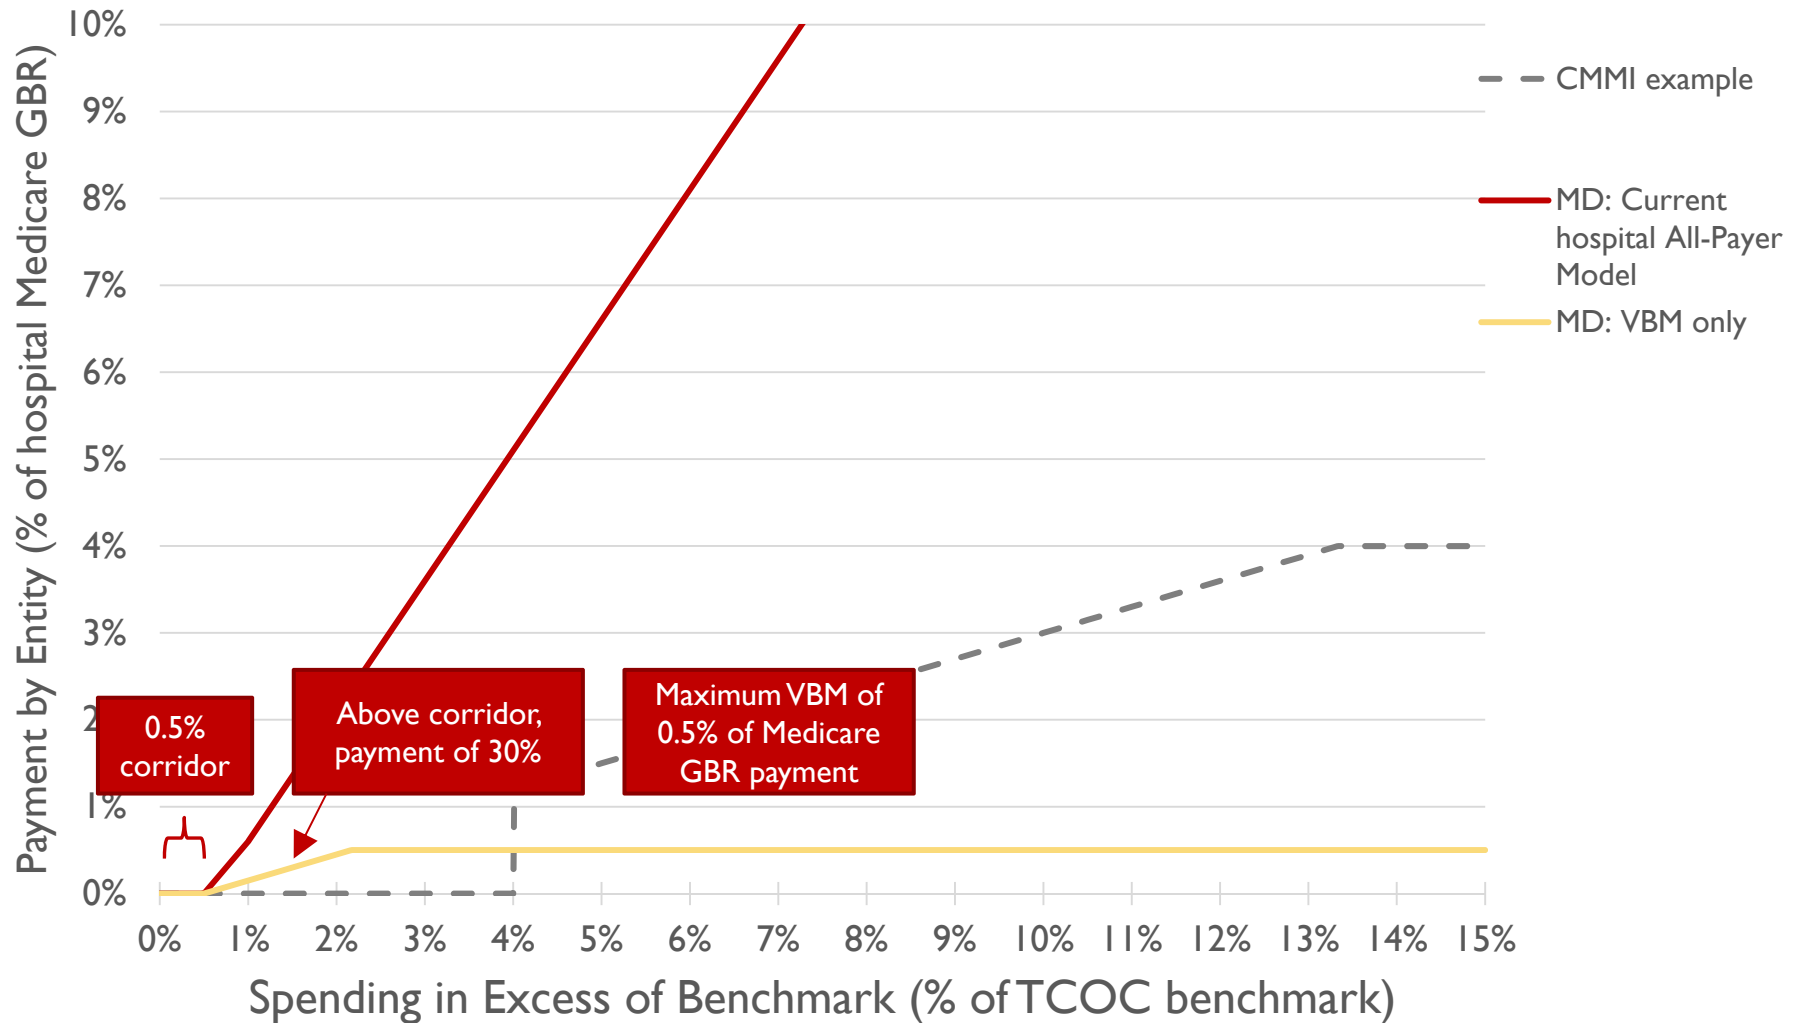

# Maryland Hospitals under Global Budget Revenue (GBR)

(Source: GBR Agreements between the state and each Maryland hospital)

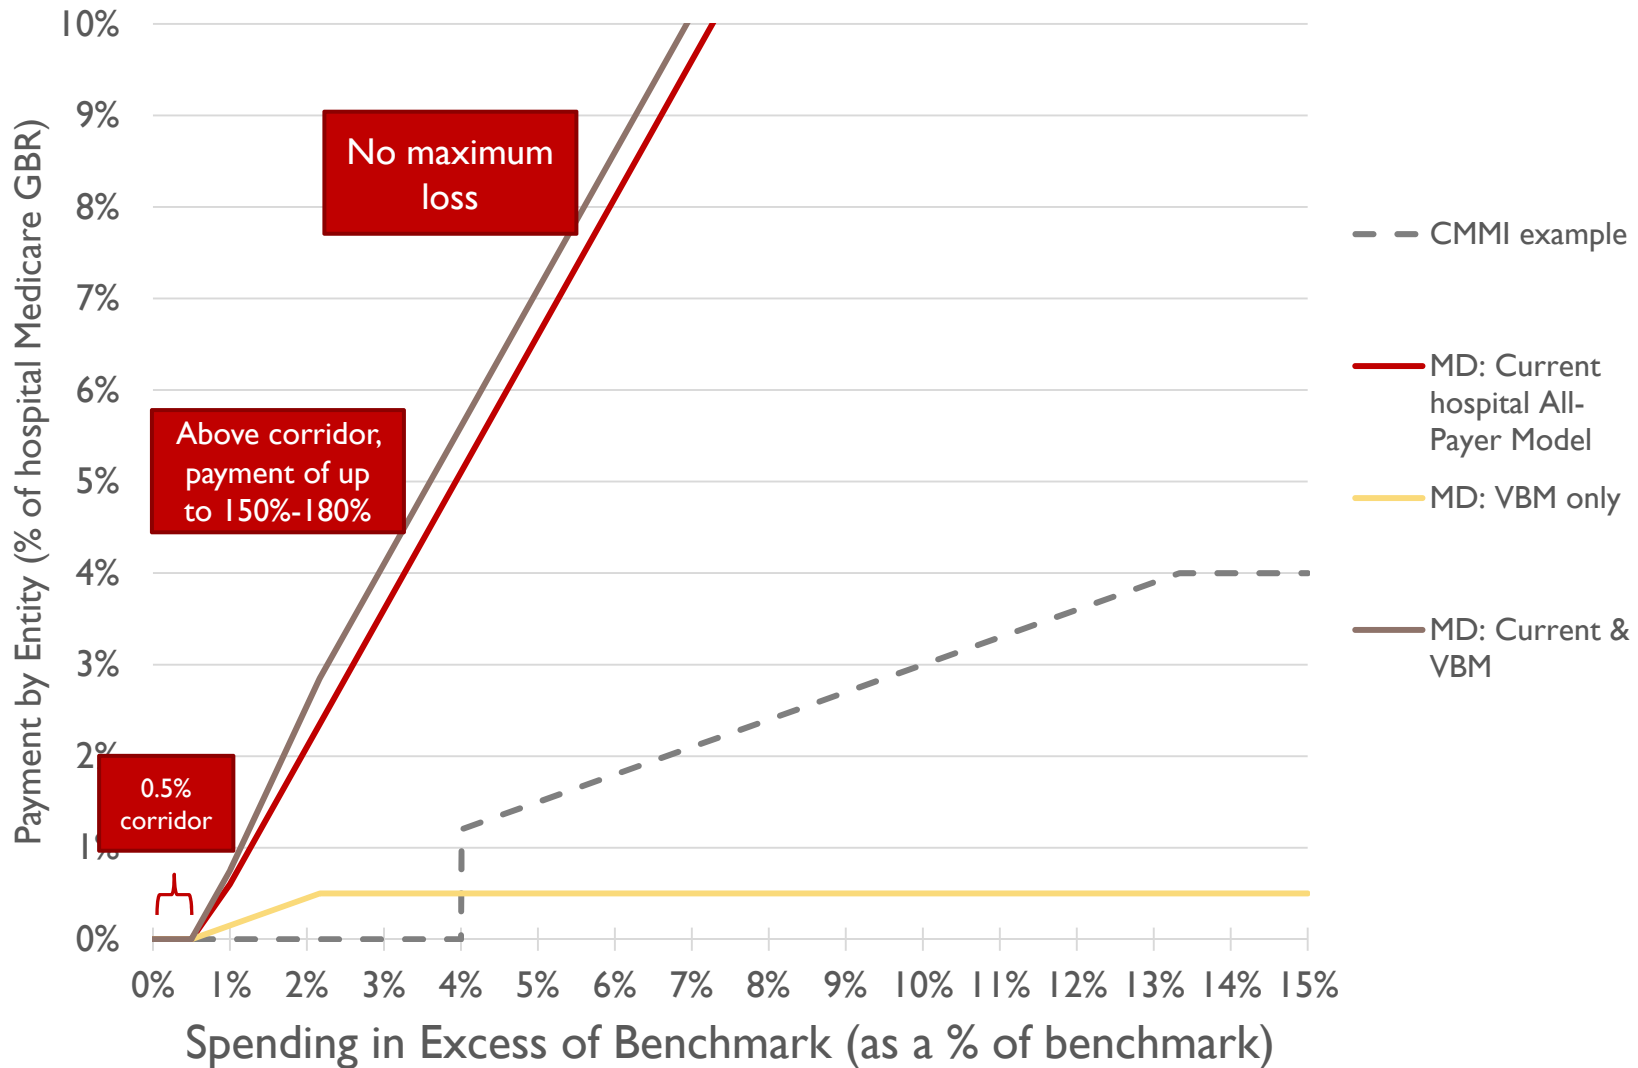

# Proposed Value-Based Modifier (VBM)

Based on Total Cost of Care (Parts A&B), including costs of physicians and other clinicians, post acute, etc.

# Combined Risk on Maryland Hospitals: All-Payer Model + VBM

## Questions for TCOC Workgroup: Possible Incentives under VBM?

---

- ▶ Although the VBM is proposed to satisfy CMMI requirements for financial responsibility on TCOC, should it also permit positive financial payments to hospitals?
- ▶ If positive payments are permitted to hospitals under the VBM, should amounts of potential incentives mirror those of penalties (symmetrical)?
- ▶ Should positive financial payments be permitted only if hospitals participate in HCIP and/or CCIP?
- ▶ Should positive amounts be designated to the CCIP Incentive Pool, for hospitals to potentially pay as gain-sharing to physicians?
